Explanations	

In accordance with "Regulation about Amendment of Electricity Market License Regulation" initially published on 1 July 2020, installation of multi-source power plants was made possible as long as they are connected to the network from the same grid.

In this respect, Aksa Göynük Enerji Üretim A.Ş.'s , 99.99% subsidiary of Aksa Enerji Üretim A.Ş., Board of Directors decided to install 35 MW of solar power plant inside the field of Bolu Göynük Thermal Power Plant with an installed capacity of 270 MW and convert the plant into hybrid power plant in order to decrease carbon emissions. Regulatory application process has started and further developments will be shared with the public in a timely manner.

We will continue to evaluate renewable investment projects in line with our diversification strategy.

Kind regards,

Note: In case of discrepancy between Turkish and English versions, Turkish version shall prevail.

We proclaim that our above disclosure is in conformity with the principles set down in “Material Events Communiqué” of Capital Markets Board, and it fully reflects all information coming to our knowledge on the subject matter thereof, and it is in conformity with our books, records and documents, and all reasonable efforts have been shown by our Company in order to obtain all information fully and accurately about the subject matter thereof, and we’re personally liable for the disclosures.
